PULYCAFF

PULY BLINDY® GIUSTA DOSE BLIND FILTER Ø 53MM

Correct cleansing procedures of espresso machine groupheads require the right balance between detergent and water doses. The blind filter Blindy® has been designed specifically for this purpose: its Giusta dose (correct dose) ring allows to use only the right quantity of pulyCAFF®, without waste. This blind filter is deeper than those typically supplied with the espresso machine, allowing the passage of the right amount of water, thus facilitating the dissolution of the detergent and the removal of dirt in the drainage channel.

PULY CLEANER® DESCALER FOR HOME ESPRESSO MACHINES

Puly Cleaner® is a powdered descaler designed for cleaning boilers, heat exchangers, heating elements, kettles, filter coffee machines, and all coffee extraction machines. Even a thin layer of limescale measuring just 0.3 millimeters has an insulating effect, lowering the temperature by approximately 5 degrees. This forces the machine to work harder to reach the desired heat, often resulting in under-extracted coffee in the cup.

Puly Cleaner® complies with HACCP regulations. It is easy to use, acts quickly, and is safe for food-contact equipment. Odorless and tasteless, it is environmentally friendly. Not suitable for use with aluminum materials.

PULYGRIND® HOPPER CLEANER SPRAY

pulyGRIND® Hopper is the practical cleaning product for coffee grinders hoppers and dosers. Made from natural and renewable sources with low environmental impact, it is part of the “Verde” product line and complies with HACCP regulations. Used periodically, it helps dissolve deposited fats, preventing the oxidative process, with a simple wipe using a cloth or paper towel. The effectiveness of pulyGRIND® Hopper, combined with its deodorising action, makes it particularly suitable for cleaning the inside and outside of hoppers and dosers, as well as stainless steel surfaces and chrome equipment, leaving them clean and sanitised. It contains no alcohol, leaves no residue or odors, and does not require rinsing.

PULYGRIND® CRYSTALS COFFEE GRINDER CLEANER

Coffee grinders play a fundamental role in the preparation of an espresso or filter coffee. In the grinding chamber, the first transformation of the bean takes place, and good grinding starts with clean burrs and blades, ensuring uniform coffee particle size and no unpleasant odors transferred to the coffee grounds. Used every 24-36 hours, pulyGRIND® Crystals ensures clean burrs and better espresso.

pulyGRIND® Crystals is the specific product designed to free flat and conical burrs and grinding chambers from coffee deposits: it comes in the form of a powder made of small crystals, with extremely high absorbent power for oils and fats. Passing through the burrs, the crystals clean them from coffee deposits. It complies with European regulations and it is part of the “Verde” line, as it is made with natural and renewable products. All ingredients of pulyGRIND® Crystals are of natural origin and completely renewable; it is gluten-free, free from allergenic substances and it does not release any dust when used.

PULYCAFF® COLDBREW “LIQUID”

Rinsing the circuits of cold brew dispensing equipment is not sufficient to remove the oily film that coffee deposits on the surfaces. A specific detergent must be used: pulyCAFF® ColdBrew “Liquid” ensures complete removal of coffee traces and leaves no residue.

It is certified by the NSF International – National Sanitation Foundation – the stringent US organization protecting public health, and formulated with raw materials recognized by the USFDA – U.S. Food and Drug Administration. Thus, it is capable of cleaning while respecting the operator, the environment, and the parts it comes into contact with. Its daily use improves the machine’s performance, restores the texture of the foam, and enhances the typical aromatic notes of this cold extraction, guaranteeing hygienic safety.

PULYMILK® PLUS STEAM AND MILK FROTHERS CLEANER

Daily use of pulyMILK® Plus ensures complete removal of residues from the processing of milk and plant-based beverages that accumulate inside and outside the steam wand. It also cleans milk pitchers, automatic frothers, and countertop milk dispensers. It is certified by the NSF International – the U.S. organization for public health protection – and formulated with raw materials recognised by the USFA – U.S. Food and Drug Administration. Hence, pulyMILK® Plus cleans while respecting the operator, the environment, and the parts it comes into contact with. Its effectiveness is ensured by a balanced formulation that first attacks milk proteins, then cleans away fats. Its built-in dispenser makes it practical and easy to use..

PULYMILK® CAPUCINO LIQUID

Complete detergent for automatic milk frothing machines. As the success of milk-based drinks in cafés is growing, manufacturers of superautomatic machines brought to the market specific equipment that can process fresh milk, stored in special integrated refrigerated containers or placed next to the machine, from which the liquid is drawn to make the selected preparation. All milk residues shall be removed, both internally and externally, in order to ensure maximum hygiene: a role that pulyMILK® Capuccino Liquid performs exceptionally well.

Used every day, it improves the quality of steam and the texture of milk foam, while reducing usage times.

PULYMILK® VERDE STEAM AND MILK FROTHERS CLEANER

Steam wands and milk frothers cleaner

pulyMILK® Verde ensures complete removal of residues from the processing of milk and plant-based beverages that accumulate inside and outside the steam wand, guaranteeing cleanliness and hygiene. It is formulated with water-soluble natural ingredients and surfactants from renewable sources of natural origin. Daily use of this certified professional cleaner is essential, as it effectively maintains both health and machine integrity: its action enhances steam quality and milk froth texture. Its built-in dispenser makes it practical and easy to use. Its effectiveness is ensured by a balanced formulation that first attacks milk proteins, then cleans away fats. It also cleans milk pitchers, automatic frothers, and countertop milk dispensers.

PULYCAFF® VERDE ESPRESSO MACHINE CLEANER

It removes coffee residues and fat deposits, while preventing the formation of unpleasant odors inside the grouphead, the discharge valve and in all water passages of the espresso machine, including filters and portafilters.

It is made using ingredients from renewable plant-based sources (such as sugar cane, roots...) rather than petroleum, completely soluble in water. In line with European regulations and compliant with the new REACH and CLP regulations.

Daily use of pulyCAFF® Plus can ensure a long-lasting and effective functioning of the espresso machine, without cleanliness-related maintenance interventions, which accounts for 70% of breakdowns. It does not release any residue and does not contain any harmful substances for the consumer or damaging to the espresso machine. Also indicated for cups and tea pots.
